

Aquatic Biology

The Lorax team is comprised of professional scientists and engineers specializing in geochemistry, climate & hydrology, hydrogeology, water quality, aquatic biology and oceanography. We work with clients in mining, power and energy, and municipal sectors. Examples of aquatic biological services we provide are summarized below across a typical project timeline.

Lorax expertise in aquatic biology encompasses both applied biology and ecotoxicology. Our experts design and implement monitoring programs for all project stages, evaluate environmental impacts to aquatic systems, and help clients navigate regulatory decision-making. Working closely with experts in water quality, hydrogeology, and hydro-meteorology, Lorax biologists and ecotoxicologists provide practical and integrated solutions to environmental aquatic challenges.
